Kim Jaechul Graduate School of Artificial Intelligence, KAIST

85 Hoegi-ro, Dongdaemun-gu, Seoul 02455, Republic of Korea, Room 9506

Research

I study generative weight-space learning: using generative models to synthesize neural networks, optimize latent spaces for compute-efficiency, and perform data-free knowledge distillation, toward a generative AutoML system that reuses pretrained models to spin up task-ready networks on demand.

EDUCATION

Ph.D in Artificial Intelligence

KAIST AI

Sept. 2020 – Present

Seoul, South Korea

I work on neural network generation with generative models, latent space optimization for computation efficiency and data free knowledge distillation including efficient transfer learning. My goal is to build a generative AutoML framework that exploits the knowledge of existing pretrained models to enhance future models development.

MSc. Electrical and Computer Engineering

Ajou University

Sept. 2017 – August 2019

Suwon, South Korea

– Supervisor: Chae Woo Lee

– Thesis: Indoor positioning and navigation based on deep neural network and Wi-Fi fingerprint.

Electronic Engineering

Institut Polytechnique Felix Houphouet Boigny

Sept. 2011 – Sept. 2014

Côte d'Ivoire

– Polytechnic degree of Engineering in Electronics and Computer Engineering.

Preparatory Classes (MPSI-MP)

Institut Polytechnique Felix Houphouet Boigny

Sept. 2009 – Sept. 2011

Côte d'Ivoire

– Studied maths and physics.

Under Review

- **B Soro**, et al, *LS-Merge: Merging Language Models in Latent Space*, submitted to ICLR-2026

ONGOING WORK

- Architecture-Agnostic Generative Initialization of LLMs
- Generative optimization of LLMs

TALK

Korea AI Expo-2023: Title: Generative network hyper-representations learning.

TEACHING

Teaching

Institut Polytechnique Felix Houphouet Boigny

Jan 2020 – May 2020

Côte d'Ivoire

- Introduction to machine learning.

Teaching Assistant

Ajou university

March 2019 – July 2019

Suwon, South Korea

- Signal and systems course.

RELEVANT INDUSTRIAL ACTIVITIES

Research Intern

Deepauto.AI

Summer 2024

Remote

- Research on weights space learning for pretrained LLMs and Latent space optimization

Software Engineer

Aroli group Intern

2016 (6 months)

Côte d'Ivoire

- Design of a firewall for blocking gray route on GSM network ss7 protocol

VOLUNTEERS

Neurips 2025 top Reviewer

Top conference Reviewer: ICML, NeurIPS, CVPR, ICLR, ICML, NeurIPS, AutoConf, WAC

COMMUNITY PROJECT

Senufo Language Writing System

2025–present

- Objective: Develop a standardized writing system for the Senufo language spoken in northern Côte d'Ivoire.
- Impact: Enable the creation of educational materials and AI tools to support remote communities that do not regularly attend school, improving access to learning.

Low-Resource LLM

2025–present

- Goal: Democratize LLMs for Senufo by building lightweight models and datasets tailored to the language.
- Outcome: Help learners transition from Senufo to French, raise educational attainment, and broaden access to modern technology.

SKILLS

Programming languages: MATLAB, C, Python

Deep learning libraries: TensorFlow, PyTorch

Mathematical backgrounds: Signal processing, Optimization theory

AI: Advanced topics in deep learning

SCHOLARSHIPS

Korea Government Scholarship (GKS) for international students (Sept. 2020 – August 2023)

Korea Government Scholarship (GKS) for international students (Sept. 2016 – August 2019)

Ivorian Government Scholarship for national students (Sept. 2009 – August 2014)

References

advisors Sung Ju Hwang (Sept. 2022 – present)

Advisor Song Chong (Sept. 2020 – present)

Advisor Lee, Chae Woo (Sept. 2017 – August 2019)
